Unit 4: Technology in Education

- Introduction to digital literacy
- Access to online education resources
- Using technology for language learning and skill development (Important skills / courses / certifications to find a job (transition to employability))

Introduction

With the knowledge and abilities to use technology for effective learning, the "Technology in Education" module aims to empower refugees and immigrants who have little or no educational experience. In order to improve learning and get beyond obstacles to education, this module focuses on using a variety of digital tools, online resources, and instructional technology.

Title: Introduction to digital literacy

This unit focuses on building essential skills for navigating digital environments, using technology responsibly, and accessing online resources for educational and personal development.

Session 1: Defining Digital Literacy

Session 2: Basic Computer Skills

Session 3: Internet Basics and Online Navigation

Session 4: Understanding Online Security

Session 5: Evaluating Online Information

Assessment

dd

Conclusion

Giving refugees and immigrants the tools they need to successfully navigate the digital world starts with the "Introduction to Digital Literacy" class. Through a focus on information literacy, security, critical thinking, communication, internet navigation, and basic computer skills, participants will gain confidence in using technology responsibly for their personal and scholastic development.

Title: Access to online education resources

This unit aims to provide participants with the skills and knowledge necessary to access educational content, participate in online courses, and leverage digital platforms for self-directed learning.

Session 1: Introduction to Online Education Resources

Session 2: Navigating Online Learning Platforms

Session 3: Effective Use of Search Engines for Learning

Session 4: Accessing Open Educational Resources (OER)

Session 5: Utilizing Language Learning Apps and Platforms

Assessment

dd

Conclusion

The "Access to Online Education Resources" unit gives learners the knowledge and self-assurance they need to take advantage of the vast amount of online educational resources. Participants will be empowered to pursue education in a flexible and accessible digital environment by offering tools for personalised learning plans, help on effective search tactics, and practical experience with online platforms.

Title: Using technology for language learning and skill development

This unit focuses on utilizing digital tools and online resources to enhance language proficiency and acquire practical skills for personal and professional growth.

Session 1: Introduction to Digital Language Learning Tools

Session 2: Interactive Language Learning Activities

Session 3: Exploring Vocational and Skill Development Apps

Session 4: Virtual Simulations and Practical Skill Application

Session 5: Language Exchange Platforms and Virtual Communities

Assessment

dd

Conclusion

The objective of the unit "Using Technology for Language Learning and Skill Development" is to enable participants to fully utilise digital resources for both personal and professional development. Participants will improve their language skills and practical competencies by incorporating technology into their language learning routines, investigating apps for skill development and employment, and creating digital portfolios. This will better equip them to negotiate the digital world.

Summary

The goal of the "Technology in Education" module is to close the digital divide by equipping immigrants and refugees with the knowledge and abilities to use technology for education. Through the introduction of diverse digital tools and online resources, participants will acquire enhanced language proficiency, relevant occupational skills, and improved access to educational possibilities in the digital era.
